

MICHAEL OMONIYI

SOFTWARE ENGINEER

[Email](#) | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

EDUCATION

- University of Lagos, Department of Systems Engineering**
Bachelor of Engineering (B.Eng.), 2022 – Present. **CGPA: 3.98**

CERTIFICATIONS

- ALX Certified Software Engineer** ([Certification Link](#)) Date Issued: June 2024
- Try Kibo Web Foundation Program** ([Certification Link](#)) Date Issued: 18th August 2023

EXPERIENCE

Frontend Engineering Intern, 8wonder (June 2024 – October 2024)

[GitHub](#)

- Contributed to innovative software solutions for businesses** by developing critical frontend features for various projects, with a focus on scalability and user experience.
- Developed and optimized a dynamic listing page** and a user-friendly dashboard for a real estate client, enhancing property search functionality and data visualization for users.
- Collaborated with cross-functional teams** to align design and functionality, improving project efficiency by 20% faster design-to-development handoff
- Enhanced usability and accessibility** through interactive components and efficient data handling, contributing to a more intuitive user experience and meeting web accessibility standards.

PROJECTS

K-Edu Learning Platform

[GitHub](#) [Live Demo](#)

- Built a **React/JavaScript-based web application** that delivers educational content and resources tailored to the Klaytn blockchain ecosystem, with features such as wallet integration and real-time blockchain interactions.
- Integrated Klaytn wallet connectivity**, resulting in a **100% success rate** in secure user authentication and interaction.
- Designed a responsive and accessible UI** that improved user navigation efficiency by **35%**.
- Reduced component re-renders by 40%** using optimized state management patterns in React.
- Utilized Klaytn API** for seamless block chain interactions and transaction processing.
- Resolved over **20** bugs during testing phases, increasing application stability and reducing crash rate to **0%**.
- Collaborated with **2 designers** and **1 block chain** experts to align educational content with current trends and user needs.

Clarify – AI Powered Career Guidance and Mentorship Application

[GitHub](#) [Live Demo](#)

- Co-developed a responsive React/JavaScript web application** that connects users with career guidance and mentorship resources using an intuitive interface and dynamic content rendering.
- Designed and shipped** an intuitive UI that improved user task completion time by **40%** during early testing sessions.
- Wrote **800+** lines of HTML5, CSS3, and JSX; implemented responsive layouts using Tailwind CSS and Bootstrap for efficient design scalability.
- Achieved a mobile responsiveness score of **98%** on Lighthouse audits across devices.
- Used Git and GitHub for version control**, with over **40 commits** and **2 pull requests** successfully merged during development.

AirBnB Clone Project (Team Project) (October 9, 2024 – October 16, 2023)

[GitHub](#)

- Designed and implemented a **backend system for an AirBnB clone** using Python, developing core data models and a command-line interface as part of a foundational full-stack application.
- Engineered the BaseModel class**, enabling **100%** consistent serialization/deserialization of all derived objects.
- Streamlined file-based persistence across 7+ classes** using a structured flow: Instance <> Dictionary <> JSON <> File.
- Developed essential classes (User, State, City, Place, etc.)** following DRY principles to support modular expansion.
- Created the first abstracted storage engine:** File storage, setting the foundation for future database integration.
- Wrote 30+ unit test** achieving **100%** test coverage and identifying **12+** edge case failures.
- Built a CLI interpreter** with **10+** commands supporting CRUD operations on all object types.

Simple Shell (UNIX Command Interpreter) (July 12, 2023-July 27, 2023)

[GitHub](#)

- Developed a lightweight UNIX shell using C**, supporting execution of built-in and external commands with process handling and user input parsing.
- Integrated built-in commands (exit, cd, ls, env)** for user-friendliness.

VOLUNTEERING/LEADERSHIP EXPERIENCE

IEEE Unilag Community

- Vice-Chair and One-time Community manager.**
- Organize technical sessions and educating students on various IEEE opportunities.

Microsoft Learn Student Community (Unilag Chapter)

- Microsoft Learn Student Ambassador, Community Core & Events Management Team Member**
- Co-supervise the community of close to 1000 members, led hackathons, boot camps, and game nights, fostering collaborative learning.

Google Developer Student Club (GDSC), Unilag

- Community Manager & Core Team Member.**
- Managed a community of close to 856 members, organized game nights, hackathons, and events, fostering a vibrant tech community.

SKILLS

- Languages/Frameworks: **JavaScript, Python, HTML, CSS, Vue.JS, ReactJS, Next.JS, Flask, TailwindCSS, Bootstrap**
- Tools: **Git, GitHub, Visual Studio Code, Linux, Vim, Pycharm, Figma, Power Apps, Power Automate**
- Responsive Design: **Media Queries, Flexbox, CSS Grid**
- Databases: **SQL, PostgreSQL**
- Operating Systems: **Linux, Windows**
- Project Management: **Notion, Trello**
- Collaboration: **Slack, Microsoft Teams, Zoom**
- Soft Skills: **Leadership, Communication, Problem Solving, Project Management, Versatility, Creativity**
